The question isn’t whether AI has potential, but where it will deliver real value in HR operations.

AI for HR by worldofwork™

Discover where intelligent process AI Agents will transform your HR operations

AI is everywhere in today’s HR conversations. Management teams ask for innovation, employees expect seamless digital experiences, and competitors are experimenting fast.

The urgency is real, but for most HR leaders, the way forward isn’t clear. Software vendors showcase flashy chatbots and ‘intelligent agents’ while HR teams still wrestle with manual processes, fragmented systems, and reporting headaches. The question isn’t whether AI has potential, but where it will deliver real value in HR operations.

Most HR departments don’t have the time or expertise to scan their processes and systems for AI opportunities. Without a clear roadmap, they risk either doing nothing or investing in tools that don’t scale and don’t solve real problems.

That’s why we created the AI for HR Fasttrack: to cut through the noise and focus on where technology can make an actual difference. In a half-day workshop together with your team we identify the HR processes where AI can reduce manual work, boost productivity, and improve employee experience for your company.

And we don’t stop there. Every identified AI use case for you HR is weighed for feasibility, impact and cost, and we propose concrete pilot deployments so HR teams can immediately choose where to start and turn controlled AI improvements into reality.

Our unique workshop-to-pilot approach lets you explore AI opportunities with minimal risk and budget, then prove value with a working automation agent before committing to large-scale transformation.

Start small, prove value, then scale

With our structured workshop-to-pilot approach, we guide clients from discovery to a working AI automation in just 12–16 weeks.

3 steps

1. Discovery of AI for HR (4 hours)

We map your HR processes and spot where AI can cut manual work or inefficiencies. Together, we capture use cases and score them on feasibility, effort, and business impact. For best results, we involve one HR decision-maker, one HR operations specialist, and the IT business partner for HR in this workshop.

2. Development of AI Agent for HR (4 weeks)

Together, we choose the most feasible and impactful use cases from Phase 1. We then build a smart AI agent, or AI integration that runs in your own IT environment, ready to be tested in a safe, real-life setting.

3. Running the Pilot (12 weeks)

In this pilot, the AI runs in your real HR setting. We gather feedback, refine performance, and measure impact, showing both its value and limits.

3 outcomes

1. AI Opportunity Matrix & Feasibility Scorecard

Your AI roadmap for HR. A clear, prioritized overview of AI opportunities, ranked by value, ease of implementation, and assessed on data, IT, governance, and compliance.

2. Prototype HR Agent for HR

A live pilot in your own IT environment. A configured AI automation with full documentation. A tangible solution tested on your real HR data.

3. Pilot Impact Report & Scale-up Recommendation

An evidence-based summary of your pilot results and lessons learned. We show what worked, what can be improved, and outline clear next steps to scale or embed the solution within your HR and IT environment.

1. AI Opportunity Matrix & Feasibility Scorecard

This is your AI roadmap for HR. Together we map out where AI can really make a difference in your HR operation. This can range from reducing manual work, smartly syncing data in different systems to speeding up reporting.

Every use case we capture is scored on:

- **Feasibility** Is it realistic, considering the number of systems and departments involved?
- **Effort required** Can it be implemented quickly, or will it demand significant time and resources?
- **Business impact** What measurable improvement can we expect from this?
- **Costs and IT dependencies** What are the costs, and are there any technical or data limitations to consider?

What you get:

A clear, visual report of potential AI applications tailored to your HR operation—ranked by impact and ease of implementation. It gives you a concrete starting point and a clear sense of direction.

2. Testable AI Agent for HR

From plan to action. Based on the AI use cases you select, we build a working AI automation in your own secure IT environment. Think of it as a smart assistant for one of your HR processes, ready to run with your real HR systems and data.

What you get:

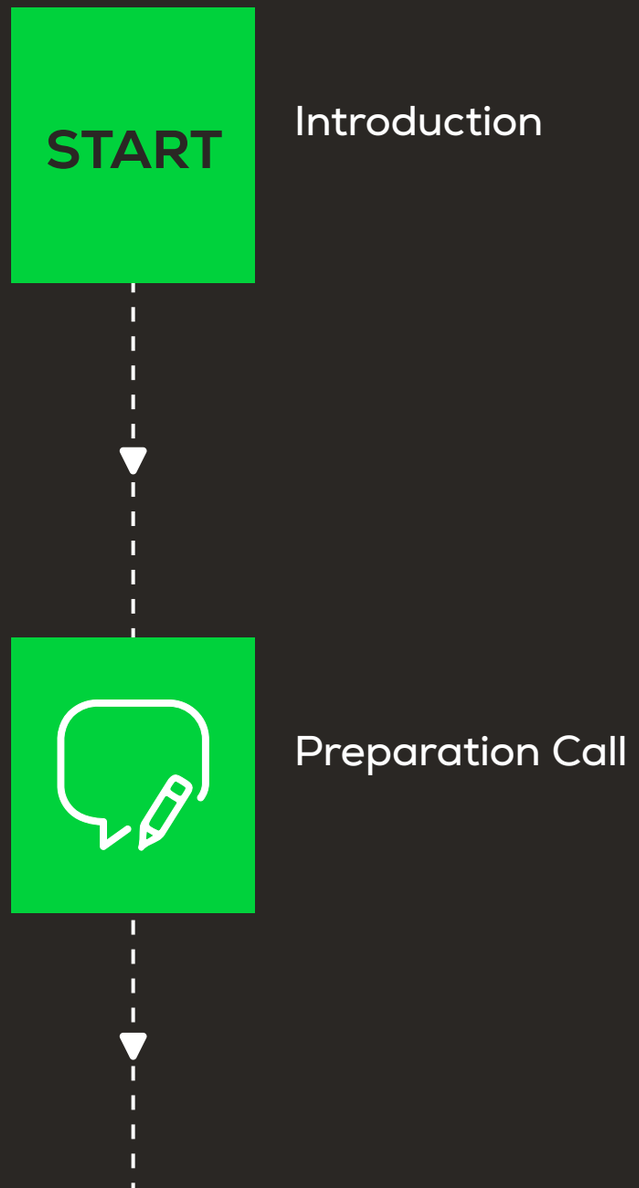
A configured automation + documentation. Not a concept, but a live, testable solution that takes work off your HR team's plate.

3. Pilot Impact Report & Scale-up Recommendation

In a 12-week pilot, you see the automation in action: running in a real business setting, gathering feedback, and improving along the way. The pilot shows what value it delivers and where its limits are.

What you get:

A clear, evidence-based report with results and lessons learned, plus practical next steps to scale, embed, or expand the solution across your HR and IT environment.



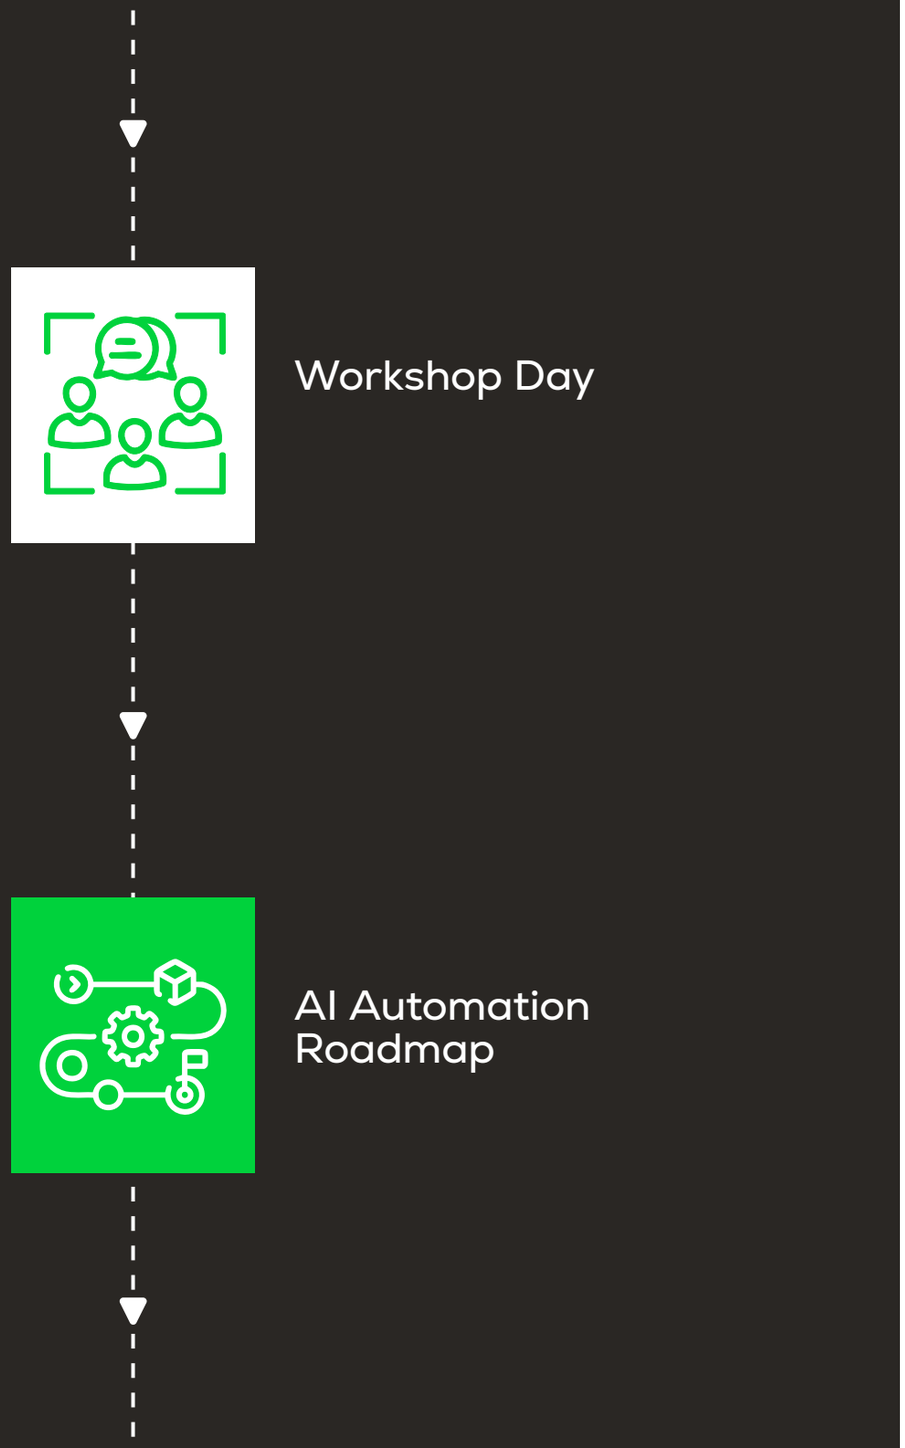
Week 1
Introduction & Preparation

Initial Introduction (30 min)

We start with a brief virtual introduction to discuss your current HR operation and your ambition. This conversation helps us understand your HR landscape and ensures the workshop focuses on your highest-priority pain points.

Preparation Call (1 hour)

Shortly after the introduction our specialists conduct a focused virtual session to gather essential information about your systems, processes, and data. We'll ask some detailed questions about the systems you use, your current HR processes and we'll identify key stakeholders to involve in the workshop.



Week 2
Workshop

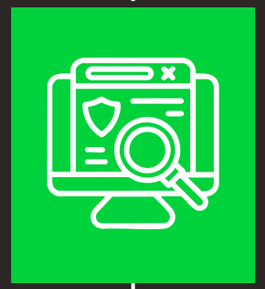
Workshop Day (+/- 4 hours)

An interactive session where we demonstrate relevant AI automation solutions for HR that we have worked on before and facilitate a deep-dive into your people processes from hire to retire. Together, we map your HR workflows, identify automation opportunities, and prioritize based on impact and feasibility.

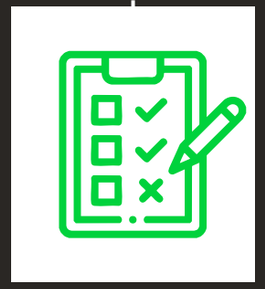
Week 4
Roadmap Delivery & Pilot Proposal

Delivery of your AI Roadmap for HR (2 hours)

You'll receive a comprehensive report outlining all identified AI use cases ranked by business value and implementation complexity. Each use case includes projections, technical requirements, and a risk assessment. In a 1-hour session, we'll walk you through the report and highlight 2–3 top candidates ideal for pilot implementation. We'll also share our recommended approach for developing and deploying an automation agent for these processes. From there, it's your call: move forward with a pilot and let us start building a prototype for your top-priority use case.



Pilot
Development



Pilot Results &
Production Plan

Week 8 - 20
Launch and run the pilot

Pilot Agent Implementation

We deploy, monitor and improve your selected process automation agent in a secure Azure environment. This production-ready pilot includes Teams integration for approvals, documentation, and optimization support proving the value before broader rollout. We closely monitor the solution and track the results, so you'll have a crystal-clear picture of how it's performing and what improvements the AI is actually delivering.

Week 20+
Evaluate and scale up

Pilot Evaluation & Scale Plan

After the pilot wraps up, you'll receive a full evaluation report: what worked, what didn't, and where the biggest gains were made. We'll give you clear, data-backed recommendations on how to fine-tune the solution and prepare it for a company-wide rollout. That includes documentation, risk and readiness assessment, and a tailored roadmap for scaling the automation agent across your organization, so you're not just experimenting, you're building real AI capability for your HR.

HR Performance by worldofwork™

For over 15 years, worldofwork™ has been at the forefront of technology, completing more than 200 successful transformations with system implementations and technical integrations for HR. This deep HR domain expertise, combined with our technical excellence in system integration and data architecture, makes us your best possible partner to identify and implement high-value AI automation opportunities.

We understand the intricacies of HR data flows across platforms like Workday, HiBob, Cornerstone, SmartRecruiters and other leading systems. Our specialists know exactly where process bottlenecks hide and how to design elegant automation solutions that respect your security requirements and compliance needs. Every recommendation we make is grounded in practical experience, not theoretical possibilities.

Example 1

Automated offboarding

Offboarding often falls through the cracks. Accounts stay active, badges go unreturned, tasks get missed. An AI agent can automatically trigger and monitor exit steps across HR and IT systems the moment a termination is recorded. No more manual tracking or email chases, but full control and auditability from day one. The result? Clean, consistent offboarding with zero loose ends.

Example 2

Smarter Payroll Check

Payroll errors kill trust, and they often come from mismatched data between HR records and actual worked hours. In this use case, an AI integration checks for discrepancies before payroll runs, cross-referencing contracts, shifts, and leave data. It flags issues early, so HR doesn't scramble on payday. The result: dramatically fewer corrections, less stress, and a payslip process employees can rely on.

Example 3

Compliance Learning

When certifications are legally required to do the job, tracking expiry dates manually isn't good enough. An AI can monitor training records, flag upcoming expiries, and notify employees and managers automatically. HR gets a live compliance dashboard, and audit readiness becomes the default, not a last-minute scramble. The result: higher compliance and lower risks.

We explore new possibilities.

Collaborative.

worldofwork™

Investment

What do you get

AI Opportunity Workshop*

In just 8 hours, our specialists work with your team to:

- Map your HR processes and identify automation opportunities
- Demonstrate relevant AI solutions from our portfolio
- Prioritize use cases by impact and feasibility
- Deliver an AI Automation Roadmap with 2-3 pilot candidates

€ 2.000,- (one-off)

Optional

Rapid Pilot Implementation

We build and deploy your chosen process automation agent:

- 4-8 week development sprint
- Secure deployment in your Azure environment
- Microsoft Teams integration for approvals
- Full transparency on architecture and costs

Up **€ 20.000,-**

Optional

Pilot Operations

2-month supported pilot includes:

- Performance monitoring and optimization
- User feedback incorporation
- Success metrics tracking
- Clear path to production

€ 1.000,- / month + usage

*Workshop fee credited toward pilot implementation
